

Summary of September 2nd short meeting

A short meeting was called the afternoon of September 2nd as rumors were going around about the bug spraying that occurred in the CSC. I clarified in the meeting what I knew from upper management regarding the spraying. I have been notified of the following and shared with the staff:

- Spraying occurred on 3 separate occasions – twice in July and the third time in early August. The spraying occurred in 259D the first two times and the third time was in 259D and the reception area of 259C. Only spraying around the areas occurred and no bug bombs were set off.
- Bed bugs were not found the last two times of spraying, only beetles were found.
- The pesticide company utilized green products each time.
- No spraying occurred in 259A, 259B or 210.
- OSHA has been here twice and cleared the area both times.
- The last time OSHA was here they met with the pesticide company, Jan and others and cleared the area.
